### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang, US Patent 6,009,598, in view of Shou-Mao, US Patent 6,128,806. Chang provides a retractable handle system of a luggage case, comprising a T-shaped member having a top central hole, an intermediate hollow neck, and a lower hollow enlargement, a spring depressible push button 60 disposed in the top central opening of the T-shaped member, and a locking.

Chang teaches the claimed invention except (1) a revised Y-shaped actuated member as claimed, (2) two connecting rods as claimed, (3) and a connecting member with a central channel and two side channels, as claimed. Shou-Mao teaches each of these general concepts—revised Y-shaped actuated member (335, 332), two connecting rods 16, and connecting member 2—generally meeting the claimed limitations. Such structure allows for the telescopic adjustment of two

tubular members, as oppose to one, providing a strong, stable handle connection, as known in the art. It would have been obvious to modify the device of Chang to include such limitations, as generally taught by Shou-Mao, for the purpose<sup>of</sup> ~~have~~ having an alternative design that would include the benefit of a strong, stable handle connection.

Regarding the limitations to aspects of the device being integrally formed, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device in this way, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. *Howard v. Detroit Stove Works*, 150 U.S. 164 (1893). Such modifications are not critical to the design and would have produced no unexpected results.
